EPISODE 2: Imagining a stronger combined role for art, science and nature connectedness storytelling.

First published: June 2nd, 2025

Guests: Jennifer Waithman Jennifer Waithman, Coordinator, Wide Bay Burnett Environment Council, Queensland, Australia and Dr Sarah Pye, children's book author and staff member, School of Science, Technology and Engineering, University of the Sunshine Coast, Queensland, Australia.

In this episode my guests imagine opportunities for a future strengthening of the collaboration between art, science, and nature connectedness. How might the increased power of storytelling which emerges help us move toward achieving a climate safer, properly nature protected, socially fairer and genuinely more prosperous future? a flourishing future which leaves no-one behind?

Both guests have great experience in combining art and science in imaginative storytelling aimed at helping educate audiences on the importance of proper protection of nature. For Sarah Pye that has included writing children's books on the topic. And Jennifer Waithman has extensive experience in interpretive guiding for nature.
