EPISODE 17: Imagining sustainable healthcare to heal people and planet:
First published 28th September 2026

Guest: Dr Forbes McGain, Director of Intensive Care at Footscray Hospital, anaesthetist and intensive care physician at Western Health, and Associate Dean for Sustainable Healthcare at the University of Melbourne, Australia.

Dr McGain's comments in this interview represent his personal views solely and may not represent the views of his employers.

In this episode of *Imagining 2040*, host Andrew Nicholson and new co-host Sophie O'Brien are joined by Dr Forbes McGain, Director of Intensive Care at Footscray Hospital. Melbourne. Dr McGain is an anaesthetist and intensive care physician at Western Health, and Associate Dean for Sustainable Healthcare at the University of Melbourne. Dr McGain is also a member of the influential advocacy group Doctors for the Environment Australia. His research and practice explores how healthcare can reduce waste, emissions and costs while maintaining rigorous standards of patient care.

In the discussion we explore the question of whether healthcare care for patients and the planet can be provided at the same time. We discuss what a better, healthier hospital system could look like by 2040 and what could be needed to achieve it.
